Rice Emergency Medical Services

is pleased to announce the Fall 2013

Emergency Medical Technician – Basic Course

Have you ever considered taking a course in emergency services? Learning skills to help at a disaster scene? Getting qualified on a state and national level as an Emergency Medical Technician? Consider taking the EMT-Basic Course at Rice this Fall! This course is a state-sanctioned EMT-Basic Certification course which includes practical and didactic exploration into prehospital care. This course will discuss anatomy, body systems, and the biochemical basis of emergency intervention in addition to the practical application of EMT-Basic skills. The course includes clinical rotations that are scheduled outside of class time. This is a three credit course in the Natural Sciences Department (NSCI 281).

Class meets every Monday and Wednesday evening, plus occasional Saturdays, during the Fall semester.

Many who take the EMT-Basic course join Rice EMS once they are certified, serving the Rice community by responding to emergency calls and providing coverage for special events on campus.

All members of the Rice community are welcome in this course - undergraduates, graduates, faculty and staff are encouraged to apply. Applications should be dropped off at RUPD by 5 P.M. on Friday, March 22nd, 2013. Go to http://rems.rice.edu to read more information and print out the application. Contact rem@rice.edu for additional information.
